Mgmt Fee: 0.85% pa*
Benchmark Yield: 4.100% as at 31 January 2026
Suggested minimum investment period: Three years or longer

FUND BENEFITS

Perpetual aims to meet its objective by utilising an active and risk aware investment process that leverages the full use of the Perpetual Credit team's experience. The strategy allows the team discretion to invest in areas of the market or a company's capital structure where they see relative value. The portfolio is diversified, takes into account changes in market-wide and security-specific credit margins while seeking to maximise returns from liquidity premiums.

FUND RISKS

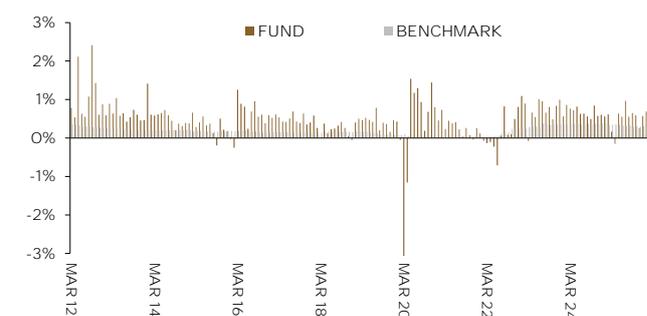

All investments carry risk and different strategies may carry different levels of risk. The relevant product disclosure statement or offer document for a fund should be considered before deciding whether to acquire or hold units in that fund. Your financial adviser can assist you in determining whether a fund is suited to your financial needs.

The Fund holds no single international asset representing more than 10% of the Fund's net asset value.

* Information on Management Costs (including estimated indirect costs) is set out in the Fund's PDS.

MARKET COMMENTARY

Credit spreads tightened as bond yields rose during a month highlighted by rising geopolitical risks, tariff threats, US Dollar weakness, surging Japanese bond yields, and the pricing of 2026 RBA rate hikes. While volatility was elevated, equity markets advanced, supported by earnings growth expectations and the benign economic outlook.

Bond yields rose across developed markets as resilient labour market data and economic growth saw markets continue to reappraise the probability of near-term monetary easing. Australian government bond yields rose over the month, at times underperforming global counterparts. The December inflation report was hotter than expected, headline inflation rising to 3.8% year on year. The Yield curve flattened as the policy sensitive short end rose more sharply. By month end, the early February rate hike was 70% priced in by markets with at least one further rate hike fully priced in for 2026. Offshore, the most substantial movement was in Japanese long-term bond yields which rose sharply reflecting inflation concerns arising from aggressive fiscal policy expansion.

Despite higher government bond yields, Australian investment-grade credit remained well supported, with tight spreads and strong demand from both domestic and offshore investors. Global IG spreads reached their tightest levels since 1998. Australian physical credit spreads were 6bps tighter on average led by utilities and real estate. Subordinated bank spreads performed well reflecting both the broader rally in credit and supply dynamics with no tier 2 issuance since early November.

Primary market issuance volumes were strong to start the year with wide variety of issuer diversity. Elevated volumes reflected supportive conditions for issuers with spreads near all-time tight, light dealer inventories and attractive pricing relative to offshore credit. Commonwealth bank issued \$5B in senior debt across 3 and 5 year tranches while Banco Santander (\$1B) and Rabobank (\$1.25B) issued 5-year senior paper. Non-financial corporate issuance accelerated towards month end with AusNet Services issuing a \$1.1B hybrid deal while Aroundtown (\$600M) and MTR corporation (\$2B) issued kangaroo bonds reflecting the accommodative conditions for AUD issuers.

PORTFOLIO COMMENTARY

Credit spread dynamics were strongly positive for performance over the month. Spreads contracted across sectors and the Fund's allocation to non-financial corporates, banks and utilities performed well. The Fund's exposure to subordinated major and offshore bank paper contributed to outperformance. Subordinated bank spreads performed well reflecting both the broader rally in credit and supply dynamics with no tier 2 issuance since early November.

The Fund's yield premium above benchmark remained the key contributing factor to outperformance over the month. The Fund's yield advantage remains predominantly attributable to non-financial corporates – including private loans – and securitised sectors. The diverse mandate ensures that the fund can capture the liquidity premia offered by private credit while maintaining exposure to liquid public credit provides portfolio ballast. At month end, the Fund's running yield was 6.2% with the average spread measured at 2.1%.

Sector and risk allocations were broadly maintained and the Fund was selective in adding new issues to the portfolio during January. The Fund took part in the new \$1.1B AusNet hybrid issuance which was offering an attractive all in yield for a defensive name. While the spread between the hybrid and senior curve is relatively tight, elevated demand for higher beta credit remains supportive.

Our proprietary credit outlook score remained neutral throughout January. The Fund remains defensively positioned while retaining the capacity to add risk where it is best rewarded and take advantage of relative opportunities in primary and secondary markets.

OUTLOOK

The credit outlook remained balanced throughout January with a neutral reading at month end.

Valuation indicators worsened slightly as US High Yield rallied below its historical fair value range. Attractive conditions for credit issuance saw an uptick in elevated issuance volumes from opportunistic and kangaroo issuers weighing on the outlook. Negative swap to bond spreads continue to detract from the valuation outlook.

The macroeconomic outlook remained neutral during January. While soft global growth expectations continue to weigh slightly on the outlook, the ratio of upgrades to downgrades is in positive territory. The credit rating outlook is benign with market participants anticipating further upgrades in 2026.

Supply and demand indicators declined marginally. Upcoming maturity volumes have normalised however elevated recent issuance volumes continue to detract from the outlook. The 2026 issuance pipeline is also building steadily, weighing on the outlook for spreads.

Technical indicators are strongly positive reflecting supportive US credit, equity and equity volatility indicators. Cash balances among real money accounts and intermediary positioning shows a capacity to take on credit risk.
